

**Sprint**

Brighter Future For All

## **Dear wireless consumers,**

While Sprint is working hard to deliver mobile 5G and the first 5G smartphone in the U.S., AT&T is hard at work trying to convince you that they already won the race to 5G with something they call “5G Evolution.” That is simply untrue.

**Don't be fooled. 5G Evolution isn't new or true 5G. It is fake 5G.**

They would love for you to believe they are different ... better. **The truth is AT&T is simply offering customers a nationwide 4G LTE network just like Sprint and all the other major wireless carriers. It's not 5G.**

## **AT&T's fake 5G claims are deceiving consumers, but **Sprint** is fighting for you.**

We filed a lawsuit against AT&T demanding that they immediately end their false and deceptive marketing campaign.

AT&T seems to be delighted by the depth and breadth of their deception. AT&T admitted that the company's 5G E advertising is strictly a narrative to outline how they want the world to work – not a reflection of today's reality.

In the coming years, 5G promises new levels of innovation and progress that will transform how we live, work and play. It will enable revolutions in smart cities, health care, connected cars, robotics, augmented and virtual reality, entertainment and more.

Sprint is proud to have played a key role in developing 5G standards that will support this faster and more reliable service. **By this summer, we will begin offering our customers real mobile 5G in nine major metro areas.**

And if the merger of Sprint and T-Mobile is approved, the new company will deliver the world's best 5G network with higher speeds and more capacity, coverage and consistency nationwide, including in rural America.

In the meantime, Sprint is committed to taking the necessary steps to successfully launch 5G. AT&T would rather skip these steps and claim to win the race to 5G by pretending their existing network is 5G. It's not, and we won't stand for it – neither should you.
